A guide to help start the conversation with your doctor to see if ADYNOVATE® is right for you

ADYNOVATE Important Information

What is ADYNOVATE?

- ADYNOVATE is an injectable medicine that is used to help treat and control bleeding in children and adults with hemophilia A (congenital Factor VIII deficiency).
- Your healthcare provider (HCP) may give you ADYNOVATE when you have surgery.
- ADYNOVATE can reduce the number of bleeding episodes when used regularly (prophylaxis).

ADYNOVATE is not used to treat von Willebrand disease.

SELECTED IMPORTANT RISK INFORMATION

Who should not use ADYNOVATE?

Do not use ADYNOVATE if you:

- Are allergic to mice or hamster protein
- Are allergic to any ingredients in ADYNOVATE or ADVATE [Antihemophilic Factor (Recombinant)]

Tell your HCP if you are pregnant or breastfeeding because ADYNOVATE may not be right for you.

Please see page 9 for ADYNOVATE Detailed Important Risk Information.

For additional safety information, click here for Prescribing Information and discuss with your HCP.
The question is how to get there

Every person who commits to prophylactic factor replacement treatment (prophylaxis) shares something in common: they want to reduce the frequency of bleeds. But there are a few things you should talk to your doctor about.

EVERYONE—WHETHER YOU ARE A PATIENT OR CAREGIVER—HAS THEIR OWN UNIQUE NEEDS WHEN IT COMES TO TREATMENT. ASKING THE RIGHT QUESTIONS CAN HELP YOU AND YOUR DOCTOR FIND A REGIMEN THAT REALLY WORKS FOR YOU.

The pivotal trial of children and adults ≥12 years of age (N=137) evaluated the efficacy, PK, and safety of ADYNOVATE twice-weekly prophylaxis (40-50 IU/kg) vs on-demand (10-60 IU/kg) treatment, and determined hemostatic efficacy in the treatment of bleeding episodes for 6 months.1
What’s important to you?

Asking yourself the following questions can help you determine your treatment needs so you can talk to your doctor today.

SELECTED IMPORTANT RISK INFORMATION

What should I tell my HCP before using ADYNOVATE?

Tell your HCP if you:

• Have or have had any medical problems.
• Take any medicines, including prescription and non-prescription medicines, such as over-the-counter medicines, supplements or herbal remedies.
• Have any allergies, including allergies to mice or hamsters.
• Are breastfeeding. It is not known if ADYNOVATE passes into your milk and if it can harm your baby.
• Are or become pregnant. It is not known if ADYNOVATE may harm your unborn baby.
• Have been told that you have inhibitors to factor VIII (because ADYNOVATE may not work for you).

Please see page 9 for ADYNOVATE Detailed Important Risk Information.
THINGS TO TRACK BEFORE YOUR NEXT VISIT

1. How many bleeds did I experience in the past year?

2. Where did my bleeds occur?

3. What is a realistic target annualized bleed rate?

If you are a patient with hemophilia A, or someone you care for has hemophilia A, tracking bleeds, having shared goals, and answering these questions can be important for you.
What is my current approach to treatment?

Asking yourself the following questions can help you and your doctor determine what is the best course of action for you.

SELECTED IMPORTANT RISK INFORMATION (continued)

What else should I know about ADYNOVATE and Hemophilia A?

- Your body may form inhibitors to factor VIII. An inhibitor is part of the body’s normal defense system. If you form inhibitors, it may stop ADYNOVATE from working properly. Talk with your HCP to make sure you are carefully monitored with blood tests for the development of inhibitors to factor VIII.

Please see page 9 for ADYNOVATE Detailed Important Risk Information.
THINGS TO CONSIDER BEFORE YOUR NEXT VISIT

1 What is my current prophylactic treatment schedule?

2 How does my current dosing schedule fit into my busy life?

3 Have I missed any infusions in the past year?
   If so, why?

Understanding and evaluating how your current prophylactic treatment schedule is working is an important step, whether it’s for you or your loved one.
What should you ask your doctor?

Asking your doctor the following questions can help ensure that you have taken into consideration some important information when making your treatment decision.

SELECTED IMPORTANT RISK INFORMATION (continued)

What important information do I need to know about ADYNOVATE?

- You can have an allergic reaction to ADYNOVATE. Call your healthcare provider right away and stop treatment if you get a rash or hives, itching, tightness of the throat, chest pain or tightness, difficulty breathing, lightheadedness, dizziness, nausea or fainting.
- Do not attempt to infuse yourself with ADYNOVATE unless you have been taught by your HCP or hemophilia center.

Please see page 9 for ADYNOVATE Detailed Important Risk Information.
1. What does it mean when a treatment has an “extended half-life”?

2. How could ADYNOVATE [Antihemophilic Factor (Recombinant), PEGylated] help me reach my bleed-reduction goals?

3. What are the risks and possible side effects of ADYNOVATE?

4. How do I know if ADYNOVATE is the correct treatment choice?

5. What would a dosing schedule look like with ADYNOVATE?

Understanding hemophilia A treatment options can help both you and your loved ones understand the impact they could have on your lives. This enables you to make decisions with your healthcare provider.
**ADYNOVATE Important Information**

**What is ADYNOVATE?**
- ADYNOVATE is an injectable medicine that is used to help treat and control bleeding in children and adults with hemophilia A (congenital Factor VIII deficiency).
- Your healthcare provider (HCP) may give you ADYNOVATE when you have surgery.
- ADYNOVATE can reduce the number of bleeding episodes when used regularly (prophylaxis).
ADYNOVATE is not used to treat von Willebrand disease.

**DETAILED IMPORTANT RISK INFORMATION**

**Who should not use ADYNOVATE?**
Do not use ADYNOVATE if you:
- Are allergic to mice or hamster protein
- Are allergic to any ingredients in ADYNOVATE or ADVATE® [Antihemophilic Factor (Recombinant)]

Tell your HCP if you are pregnant or breastfeeding because ADYNOVATE may not be right for you.

**What should I tell my HCP before using ADYNOVATE?**
Tell your HCP if you:
- Have or have had any medical problems.
- Take any medicines, including prescription and non-prescription medicines, such as over-the-counter medicines, supplements or herbal remedies.
- Have any allergies, including allergies to mice or hamsters.
- Are breastfeeding. It is not known if ADYNOVATE passes into your milk and if it can harm your baby.
- Are or become pregnant. It is not known if ADYNOVATE may harm your unborn baby.
- Have been told that you have inhibitors to factor VIII (because ADYNOVATE may not work for you).

**What important information do I need to know about ADYNOVATE?**
- You can have an allergic reaction to ADYNOVATE. Call your healthcare provider right away and stop treatment if you get a rash or hives, itching, tightness of the throat, chest pain or tightness, difficulty breathing, lightheadedness, dizziness, nausea or fainting.
- Do not attempt to infuse yourself with ADYNOVATE unless you have been taught by your HCP or hemophilia center.

**What else should I know about ADYNOVATE and Hemophilia A?**
- Your body may form inhibitors to factor VIII. An inhibitor is part of the body’s normal defense system. If you form inhibitors, it may stop ADYNOVATE from working properly. Talk with your HCP to make sure you are carefully monitored with blood tests for the development of inhibitors to factor VIII.

**What are possible side effects of ADYNOVATE?**
- The common side effects of ADYNOVATE are headache and nausea. These are not all the possible side effects with ADYNOVATE. Tell your HCP about any side effects that bother you or do not go away.

You are encouraged to report negative side effects of prescription drugs to the FDA. Visit www.fda.gov/medwatch, or call 1-800-FDA-1088.
